## Report of Extruded Rail Load / Deflection Testing

**Client:** Gridworx, Ltd.

**Report No.:** 13920-302

**Project:** Thin Veneer Intermediate "T" Anchor 302

**Project No.:** 20-00157-900-01

**Date of Service:** 3/30/2020

Construction Testing Sciences (CTS) was retained by Gridworx, Ltd. to perform compression load / deflection testing on a continuous intermediate "T" anchor, identified as Thin Veneer Intermediate Anchor 302. This test program consisted of a steel frame with vertical members at 16" o.c., simulating metal studs. DensGlass sheathing was secured to the frame, followed by installation of the anchor, which measured 34" long. The anchor was secured to the frame with 1/4" Ø self-tapping hex head screws. A rigid steel loading bar, simulating kerfed stone, was placed on the anchor through which to apply a compression load. Dial gauges were installed at each end of the the anchor to measure deflection under load. Initially, load was applied in 25 lbs. increments up to 300 lbf., followed by loading in 50 lbs. increments up to 2,100 lbf. Deflection was recorded at each increment throughout the test. A total of five anchors were tested in this manner. Results of these tests are given on the following pages.

We trust the information provided is acceptable for your use. If you have any questions or require additional information please contact us.

Respectfully submitted,

A handwritten signature in blue ink, appearing to read "Jack Gary".

Jack Gary  
General Manager

**LIMITATIONS:** The test results presented herein were prepared based upon the specific samples provided for testing. We assume no responsibility for variation in quality (composition, appearance, performance, etc.) or any other feature of similar subject matter provided by persons or conditions over which we have no control. Our letters and reports are for the exclusive use of the clients to whom they are addressed and shall not be reproduced except in full without the written approval of Construction Testing Sciences, LLC.
