PanelSync

Keep Panels in Plane.
Keep Joints Consistent.

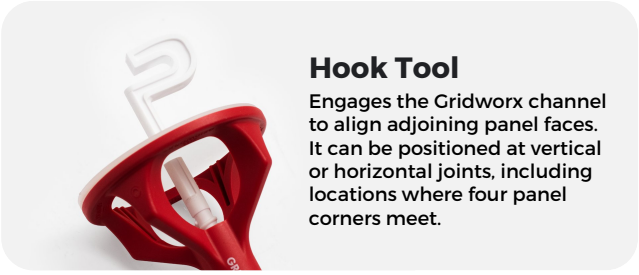

Precise alignment.
A cleaner finish.

PanelSync helps installers reduce lippage and fine-tune panel alignment for a more consistent facade

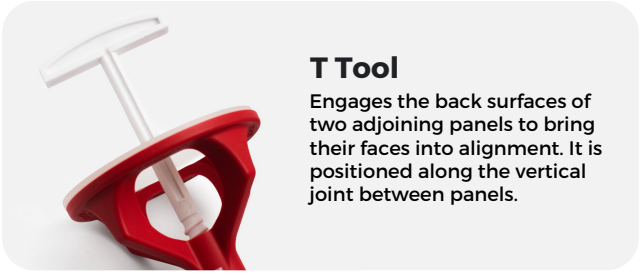

- **Fine-tune alignment**
- **Reduce lippage**
- **Reuse across installations**

Hook Tool

Engages the Gridworx channel to align adjoining panel faces. It can be positioned at vertical or horizontal joints, including locations where four panel corners meet.

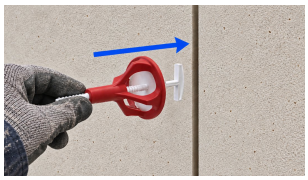

T Tool

Engages the back surfaces of two adjoining panels to bring their faces into alignment. It is positioned along the vertical joint between panels.

Align in four simple steps

1 Engage

Position PanelSync at the target panel/joint location.

Workflow shown with T Tool

2 Fine Tune

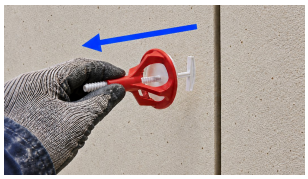

Turn the handle to adjust panel alignment.

3 Hold

Maintain alignment while the silicone sets.

4 Release

Disengage and reuse at the next location.

Bring greater consistency to your next installation.
