## Report of Discrete Ultra XL Anchor Pullout Testing

Client: Precision Wall Systems, Inc., dba Gridworx
Project: Discrete Ultra XL 571 Anchor
Project No.: 20-00157-900-02
Report No.: 14618-581
Date of Service: 06/02/21

Construction Testing Sciences (CTS) was retained by Precision Wall Systems, Inc., dba Gridworx to perform pullout testing on "L" brackets simulating wind load. This testing was performed on "L" brackets identified as Ultra XL Anchor, Part Number 570. This testing was achieved by securing a 12 " long section of Ultra XL Anchor to a rigid test fixture which was secured to the tensile test machine. A 4" long piece of Discrete Dead Load Rail, Part Number 571 was interlocked into the Ultra XL Anchor. A tensile fixture was then secured to the dead load rail to allow for tensile loading. A tensile load was then applied to the dead load rail until failure. Results of these tests are given below.

| Sample No. | Ultimate Load (lbs.) | Failure Mode |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2050 | Clip fracture at die mark |  |  |  |
| 2 | 1988 | Clip fracture at die mark |  |  |  |
| 3 | 2030 | Clip fracture at die mark |  |  |  |
| 4 | 2060 | Clip fracture at die mark |  |  |  |
| 5 | 1953 | Clip fracture at die mark |  |  |  |
| Average | $\mathbf{2 0 1 6}$ |  |  |  |  |
|  |  |  |  |  |  |

Note: Load applied at a rate of 500 lbs . per minute.
